

Exelon Power

Exelon Power is the business unit within Exelon Generation Company, L.L.C. that is responsible for managing, operating, and maintaining the company's fossil and hydroelectric fleet of generating assets. Mark Schiavoni is president of Exelon Power.

The current fleet consists of 108 fossil and hydroelectric units capable of generating more than 8,000 megawatts (MW) of electricity in Pennsylvania, Maryland, Illinois, Texas and Massachusetts.

Exelon Power's diverse generating portfolio enables the company to be competitive in the deregulated power market during the intermediate seasons and peak demand periods.

Exelon Power will build upon existing relationships by continuing to promote strong community relations, stressing environmental and safety performance, while being a solid corporate citizen in the states and communities in which it operates.

Exelon Power is committed to environmentally responsible operations. Efforts to date have included:

- Using landfill-based methane gas as the primary fuel source at Fairless Hills Generating Station
- Installation of new coal burners and a selective non-catalytic reduction system (SNCR) on Cromby Unit 1 to further reduce nitrogen-based compound emissions (NO_x)
- Installation of sulfur dioxide scrubbers on Eddystone Units 1 and 2 and Cromby Unit 1
- Installation of a selected catalytic reduction system (SCR) at Handley Units 3, 4, and 5, and at Mountain Creek Unit 8
- Installation of low-flow aerating runners at Conowingo Units 2 and 5
- Installation of wired wedge screens on the cooling water intakes at Eddystone to protect fish in the Delaware River
- Installation of two fish lifts at the Conowingo Dam to help restore the American shad population by enabling these migratory fish to reach their upstream breeding areas
- Ongoing construction of two fish passageways along the Schuylkill River in southeastern Pennsylvania to enable Shad migration along the river
- Protection and preservation of the Bald Eagle Sanctuary on Conowingo Pond, in cooperation with, the Pennsylvania Game Commission
- Stewardship of 6,000 acres of land along the lower Susquehanna River including Muddy Run Park, Fishermans Park, and Shures Landing Wildflower Area which have been set aside for public use
- Scheduled to open in the Fall of 2008, Exelon has developed a Renewable Energy Education Center at Fairless Hills that will host field trips educating school students in the science of utilizing renewable resources in the production of electrical energy
