

# Mountain Creek Generating Station

## Plant Statistics

### Location:

---

Dallas, Texas

### Capacity:

---

893 MW

### Configuration:

---

5 units; natural gas or oil

## Milestone

Exelon purchased the Mountain Creek facility from TXU in April 2002. In May 2003, the SCR Project (Selective Catalytic Reduction), to reduce NO<sub>x</sub> emissions, was completed on Unit 8, reducing that unit's NO<sub>x</sub> emissions 90 percent compared to 2002 levels.

## History

The site's original 34.5-MW, air-cooled generator, now retired, was built in 1938. Its first hydrogen-cooled, natural gas, 33-MW unit was built in 1945. When Unit 8 was added, it was only the second super-critical unit in the United States.
