About Constellation
Constellation is a leading competitive energy company providing power, natural gas and energy products and services for homes and businesses across the continental United States. Constellation serves more than 2.5 million residential, public sector and business customers, including more than two-thirds of the Fortune 100. Constellation is a subsidiary of Exelon Corporation (NYSE: EXC), the nation's leading competitive energy provider, with 2014 revenues of approximately $27.4 billion, and more than 32,000 megawatts of owned capacity comprising one of the nation's cleanest and lowest-cost power generation fleets.

By the Numbers
- Employees ................................................................. 2,200
- Power delivered in 2014 ........................................................ Approximate 180 Terawatt-hours
- Gas delivered in 2014 .......................................................... More than 2 Trillion Cubic Feet
- Distributed energy assets in operation or under development ...... More than 300 Megawatts
- Customer carbon dioxide emissions reduced since 2014.......... More than 19,000 tons
- Charitable contributions in 2014 .............................................. $4 million
- Employee volunteer hours in 2014 ...................................... 17,500

Innovative and Integrated Solutions
Constellation has been a trusted and dependable wholesale and retail energy supplier for over a decade. We help customers manage energy market volatility, improve energy efficiency and meet environmental goals by providing tailored energy solutions that deliver the right energy mix while improving reliability. Our direct access to every part of the energy value chain helps us deliver innovative, integrated energy solutions and empowers our customers to make smarter choices.

Power
Constellation is the leading competitive power provider to commercial and industrial customers, and serves residential electricity customers in 17 states and the District of Columbia. We offer retail customers budget stability and purchasing flexibility, with options for fixed, index and blended pricing solutions, as well as renewable energy supply. Our wholesale electricity supply business provides energy to utilities, municipal co-ops and energy retailers nationwide, managing the sales, dispatch and delivery from Exelon’s portfolio of more than 32,000 MW of power generation.

Natural Gas
Constellation is one of the nation’s 10 largest natural gas marketers, delivering more than 2 trillion cubic feet of gas annually to residential, commercial and industrial customers. Our presence in the natural gas market spans the entire value chain from upstream investments in exploration and production properties, to midstream trading, transport and storage, to downstream physical gas supply, pricing, forward hedging and risk management. In 2015, Constellation leveraged its scale and core expertise as a leading natural gas supplier to enter the compressed natural gas market through the acquisition and development of compressed natural gas fueling stations through its distributed energy business.

Distributed Energy
Constellation offers customers distributed energy solutions through solar, co-generation, fuel cells, battery storage, and standby generation, to help customers more efficiently and reliably meet their energy needs, often without upfront costs as part of a power purchase agreements. These on-site assets allow companies to remain operational in the event of broader electricity grid disruptions, and reduce their greenhouse gas emissions through installation of low-carbon or renewable assets.

Energy Efficiency
Constellation offers robust programs that help customers achieve comprehensive energy management objectives and meet environmental goals. We’ve developed more than 4,000 energy efficiency projects for commercial customers – often without upfront capital expense – as part of energy savings performance contracts. Through

www.constellation.com
Constellation’s Efficiency Made Easy offering, businesses can fund energy and water conservation measures as part of their electricity supply bill and reduce energy costs.

**Constellation Technology Ventures**
Constellation Technology Ventures (CTV), Exelon’s venture capital fund, drives innovation by researching and investing in emerging energy technologies with the goal of providing new solutions to customers in competitive markets. CTV invests in cutting-edge energy start-ups to help shape our energy future, and acts as a forward-looking research function, alerting us to emerging energy technologies that could transform our industry.

**Driving Customer Choice and Competition**
Constellation, with its parent company Exelon, is the leading energy industry advocate for competition in the U.S. power and natural gas sectors. We believe that well-designed competitive markets encourage innovation and deliver better results than either traditional monopoly markets or partly restructured markets. Competition provides price transparency, drives investments in generation for reliable electricity supply, and enables cost-effective development of clean energy sources. Constellation has strong expertise in the policies and regulations that govern power markets, and proactively engages with federal and state regulators to advocate for policies that will improve competition in the markets in which we operate.

**Community Partner**
Constellation strives to be a model corporate citizen committed to giving back to the communities we serve. We partner with local and national non-profit leaders that are working to improve our communities, through financial and human capital investments. Constellation’s corporate citizenship program focuses on three areas: education, the environment, and economic and community development. As part of our commitment to education, our E2: Energy to Educate Grants support projects that enhance student understanding of the science and technology needed to address energy issues, and inspire students to think differently about energy. Through our Community Champions program, our residential customers can apply for small grants from Constellation for causes that are important to their community. Additionally, we are committed to supporting energy improvements for Habitat for Humanity homes to ultimately increase affordability for each family through energy savings, and support numerous other organizations including Junior Achievement, Boys & Girls Club of American, and Chesapeake Bay Trust.

**Environmental Stewardship**
Constellation is committed to a clean energy future, offering energy options to customers that are sustainable for the environment and the economy. We’re among the top ten commercial solar developers in the nation with 76 commercial, industrial and governmental customer solar installations, totaling more than 200 MW of capacity. In 2014, Constellation procured 2.4 million megawatt-hours of Renewable Energy Certificates (RECs) for customers, enabling them to avoid more than 1.3 million metric tons of greenhouse gas emissions and support the development of renewable power generation. And we lead by example, enacting sustainability programs for our overall business footprint. Constellation matches 100 percent of the electricity requirements for several of our offices and data centers nationwide with RECs sourced from wind resources, and engages our employees in programs that reduce our carbon impact through in-office recycling and other initiatives.
