

Wind

Exelon Generation has a portfolio of 42 wind projects located in 11 states that in total are capable of generating nearly 1,640 megawatts (MW).

- **Idaho** - Four wind projects are currently operational in Idaho that are capable of producing a total of 128.2 MW of clean electricity.
- **Illinois** – AgriWind Project is an 8.4 MW wind project that is located in Tiskilwa, Illinois.
- **Kansas** – Two wind projects are currently operational in Kansas, Greensburg and Shooting Star, which are capable of generating a total of 116.5 MW of clean energy.
- **Maryland** – Three wind projects are operational in Garrett County, Maryland that are capable of generating a total of 140 MW of clean electricity.
- **Michigan** – Six wind projects are currently operational in Michigan that are capable of producing a total of 402 MW of clean electricity.
- **Minnesota** - Four wind projects are currently operational in Minnesota that are capable of producing a total of 49.9 MW of clean electricity.
- **Missouri** - Four wind projects are currently operational in Missouri that are capable of producing a total of 162.5 MW of clean electricity.
- **New Mexico** – Wildcat Wind Project is a 27 MW wind project located near Lovington, New Mexico.
- **Oklahoma** – Bluestem Wind is a 198 MW project located in Beaver, Oklahoma.
- **Oregon** - Four wind projects are currently operational in Oregon that are capable of producing a total of 74.5 MW of clean electricity.
- **Texas** – Eleven wind projects are currently operational in Texas that are capable of producing a total of 329.8 MW of clean electricity.
